Deploying ELK Stack on Docker Container

Create Spring REST Project

```
package com.example.howtodoinjava.hellodocker;

import java.util.Date;
import org.springframework.boot.SpringApplication;
import org.springframework.boot.autoconfigure.SpringBootApplication;
import org.springframework.web.bind.annotation.PathVariable;
import org.springframework.web.bind.annotation.RequestMapping;
import org.springframework.web.bind.annotation.RestController;

@SpringBootApplication
public class HelloDockerApplication {

   public static void main(String[] args) {
      SpringApplication.run(HelloDockerApplication.class, args);
   }
}

@RestController
class HelloDockerRestController {
   @RequestMapping("/hello/{name}")
   public String helloDocker(@PathVariable(value = "name") String name) {
      String response = "Hello " + name + " Response received on : " + new Date();
        System.out.println(response);
      return response;

   }

}
```

application.properties :

server.port = 9080

Dockerfile

```
FROM openjdk:8-jdk-alpine
VOLUME /tmp
ADD target/hello-docker-0.0.1-SNAPSHOT.jar hello-docker-app.jar
ENV JAVA_OPTS=""
ENTRYPOINT [ "sh", "-c", "java $JAVA_OPTS -
Djava.security.egd=file:/dev/./urandom -jar /hello-docker-app.jar" ]
```

pom.xml

```
<plugin>
   <groupId>com.spotify</groupId>
   <artifactId>dockerfile-maven-plugin</artifactId>
   <version>1.3.4</version>
   <configuration>
      <repository>${docker.image.prefix}/${project.artifactId}</repository>
   </configuration>
</plugin>
<plugin>
   <groupId>org.apache.maven.plugins</groupId>
<artifactId>maven-dependency-plugin</artifactId>
   <executions>
      <execution>
         <id>unpack</id>
         <phase>package</phase>
         <goals>
            <goal>unpack</goal>
         </goals>
         <configuration>
            <artifactItems>
```

```
                <artifactItem>
                    <groupId>${project.groupId}</groupId>
                    <artifactId>${project.artifactId}</artifactId>

  public static void main(String[] args)

  {

    ApplicationContext ctx =
SpringApplication.run(SpringBootDemoApplication.class, args);
```

```
        String[] beanNames = ctx.getBeanDefinitionNames();
        Arrays.sort(beanNames);
        for (String beanName : beanNames)
        {
            System.out.println(beanName);
        }
    }
}
```

EmployeeController.java

```
import java.util.ArrayList;
import java.util.List;
import org.springframework.web.bind.annotation.RequestMapping;
import org.springframework.web.bind.annotation.RestController;
import com.howtodoinjava.demo.model.Employee;

@RestController
public class EmployeeController
{
   @RequestMapping("/")
    public List<Employee> getEmployees()
{
```

```
    List<Employee> employeesList = new ArrayList<Employee>();
    employeesList.add(new
Employee(1,"lokesh","gupta","howtodoinjava@gmail.com"));
    return employeesList;
  }
}
```

Employee.java

```
public class Employee {
  public Employee() {
  }
  public Employee(Integer id, String firstName, String lastName, String email) {
    super();
    this.id = id;
    this.firstName = firstName;
    this.lastName = lastName;
    this.email = email;
  }
private Integer id;
  private String firstName;
  private String lastName;
  private String email;
```

```
  //getters and setters

  @Override
  public String toString() {
    return "Employee [id=" + id + ", firstName=" + firstName
        + ", lastName=" + lastName + ", email=" + email + "]";
  }
}
```

ElkExampleSpringBootApplication.java

```
package com.example.howtodoinjava.elkexamplespringboot;

            e.printStackTrace(pw);
            String sStackTrace = sw.toString(); // stack trace as a string
            LOG.error("Exception As String :: - &gt; "+sStackTrace);

            rsp = sStackTrace;
        }

        return rsp;
    }
}
```

application.properties

```
logging.file=elk-example.log
spring.application.name = elk-example
```

Logstash Configuration

```
input {
  file {
```

```
    type => "java"
    path => "F:/Study/eclipse_workspace_mars/elk-example-spring-boot/elk-example.log"
    codec => multiline {
      pattern => "^%{YEAR}-%{MONTHNUM}-%{MONTHDAY} %{TIME}.*"
      negate => "true"
      what => "previous"
    }
  }
}

filter {
  #If log line contains tab character followed by 'at' then we will tag that entry as stacktrace
  if [message] =~ "\tat" {
    grok {
      match => ["message", "^(\tat)"]
      add_tag => ["stacktrace"]
    }
  }

 grok {
    match => [ "message",
              "(?<timestamp>%{YEAR}-%{MONTHNUM}-%{MONTHDAY} %{TIME})  %{LOGLEVEL:level} %{NUMBER:pid} --- \[(?<thread>[A-Za-z0-9-]+)\] [A-Za-z0-9.]*\.(?<class>[A-Za-z0-9#_]+)\s*:\s+(?<logmessage>.*)",
              "message",
              "(?<timestamp>%{YEAR}-%{MONTHNUM}-%{MONTHDAY} %{TIME})  %{LOGLEVEL:level} %{NUMBER:pid} --- .+? :\s+(?<logmessage>.*)"
            ]
  }

  date {
    match => [ "timestamp" , "yyyy-MM-dd HH:mm:ss.SSS" ]
  }
}

output {
```

```
  stdout {
    codec => rubydebug
  }

  # Sending properly parsed log events to elasticsearch
  elasticsearch {
    hosts => ["localhost:9200"]
  }
}
```

Kibana Configuration

```
pipeline {
    agent {
        docker {
            image 'maven:3-alpine'
            args '-v /root/.m2:/root/.m2'
        }
    }
    stages {
      stage('Build') {
            steps {
                sh 'mvn -B -DskipTests clean package'
            }
        }
    }
}
```

test stage to your Pipeline

```
      stage('Test') {
      steps {
                sh 'mvn test'
            }
            post {
                always {
```

```
                junit 'target/surefire-reports/*.xml'
            }
        }
    }
```

```
pipeline {
    agent {
        docker {
            image 'maven:3-alpine'
            args '-v /root/.m2:/root/.m2'
        }
    }
    stages {
        stage('Build') {
            steps {
                sh 'mvn -B -DskipTests clean package'
            }
        }
        stage('Test') {
            steps {
                sh 'mvn test'
            }
            post {
                always {
                    junit 'target/surefire-reports/*.xml'
                }
                }
        }
    }
}
```

Test stage of your Jenkinsfile:

```
1.          stage('Deliver') {
2.              steps {
```

```
3.                 sh './jenkins/scripts/deliver.sh'
4.             }
        }
```

and add a skipStagesAfterUnstable option so that you end up with:

```
pipeline {
    agent {
        docker {
            image 'maven:3-alpine'
            args '-v /root/.m2:/root/.m2'
        }
    }
    options {
        skipStagesAfterUnstable()
    }
    stages {
        stage('Build') {
            steps {
                sh 'mvn -B -DskipTests clean package'
            }
        }
        stage('Test') {
            steps {
                sh 'mvn test'
            }
            post {
                always {
                    junit 'target/surefire-reports/*.xml'
                }
            }
        }
        stage('Deliver') {
            steps {
                sh './jenkins/scripts/deliver.sh'
            }
        }
    }
}
```
