

## Output of capstone project : MYMOVIEPLAN

The image displays two screenshots of the Jenkins web interface, showing the process of creating a new item named 'mymovieplan'.

**Top Screenshot: New Item Page**

- The browser address bar shows `localhost:8081/view/all/newJob`.
- The page title is "Enter an item name".
- The input field contains the text "mymovieplan".
- Below the input field, there is a link: `>> Required field`.
- Below the input field, there are four options for creating a new item:

- Freestyle project**: This is the central feature of Jenkins. Jenkins will build your project, combining any SCM with any build system, and this can be even used for something other than software build.
- Pipeline**: Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.
- Multi-configuration project**: Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.
- Folder**: Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.

**Bottom Screenshot: Configuration Page**

- The browser address bar shows `localhost:8081/job/mymovieplan/configure`.
- The page title is "Jenkins".
- The page shows the configuration for the job "mymovieplan".
- The "General" tab is selected.
- The "Description" field is empty.
- The "Build Triggers" section has the following options:

- ☐ Discard old builds
- ☐ Do not allow concurrent builds
- ☐ Do not allow the pipeline to resume if the controller restarts
- ☒ GitHub project

The "Project url" field is set to `https://github.com/sky0702/MyMoviePlan`.

The "Build Triggers" section has the following options:

- ☐ Pipeline speed/durability override
- ☐ Preserve stashes from completed builds
- ☐ This project is parameterized
- ☐ Throttle builds

The "Build Triggers" section has the following options:

- ☐ Build after other projects are built
- ☐ Build periodically
- ☐ GitHub hook trigger for GITSCM polling

The "Save" button is highlighted.
