DESCRIPTION

Project objective:

As a Full Stack Developer, design and develop an airline booking portal named as FlyAway. Use the GitHub repository to manage the project artifacts.

Background of the problem statement:

FlyAway is a ticket-booking portal that lets people book flights on their website.

Generic feature of the application:

In the given code Design and Develop an airline booking portal named as FlyAway. A MySQL Database is created to store product data. FlyAway is a ticket booking portal that lets the people book flights on the websites.

To develop this project the following are used:

- Maven to create a web enabled maven project (archetype)
- Apache Tomcat as the web server.
- JSP for the front end.
- Servlets for backend processing.
- Hibernate to store data into the database.

Pushing the code to your GitHub repositories:

- Open your command prompt and navigate to the folder where you have created your files. **Cd<floder path>**
- Initialize your repository using the following command: **git init**
- Add all the files to your git repository using the following command: **git add .**
- Commit the changes using the following command: **git commit . -m "Changes have been committed."**
- Push the files to the folder you initially created using the following command: **git push -u origin master**
