SimpliLearn :

Assement Project : 2

- **Create a Spring Boot project that will capture user feedback using a REST endpoint. The REST resource will take in parameters using HTTP POST. The feedback data will be then added to a database table.**

Source Code:
com.controller
FeedbackController.java

```
package com.controller;

import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.stereotype.Controller;
import org.springframework.web.bind.annotation.GetMapping;

import com.service.AppService;

@Controller
public class FeedbackController {

        @Autowired
        private AppService appService;

        @GetMapping("/feedback")
        public String feedback() {
                return "feedback";
        }
}
```

MyRestApp.java

```java
package com.controller;

import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.web.bind.annotation.PostMapping;
import org.springframework.web.bind.annotation.RequestParam;
import org.springframework.web.bind.annotation.RestController;

import com.entity.Feedback;
import com.service.AppService;

@RestController
public class MyRestApp {

        @Autowired
        private AppService service;

        @PostMapping("/feedback")
        public String userRegister(@RequestParam("firstname") String firstname,
@RequestParam("lastname") String lastname, @RequestParam("email") String email ,
@RequestParam("feedback1") String feedback1) {
        Feedback f = new Feedback(firstname, lastname, email,feedback1);
        boolean data= service.addFeedback(f);
        if(data) {
                return "Feedback added succesfully!";
        }
        else {
                return "Unable to add the feedback";
        }

        }
}
```

Com.dao
MyRepo.java

```java
package com.dao;

import org.springframework.data.repository.CrudRepository;
import org.springframework.stereotype.Repository;

import com.entity.Feedback;

@Repository
public interface MyRepo extends CrudRepository<Feedback, Integer>{

}
```

Com.entity
Feedback.java

```java
package com.entity;

import javax.persistence.Entity;
import javax.persistence.GeneratedValue;
import javax.persistence.Id;
import javax.persistence.Table;

@Entity @Table(name="feedback")
public class Feedback {
	@Override
	public String toString() {
		return "Feedback [id=" + id + ", firstname=" + firstname + ", lastname=" +
lastname + ", email=" + email
					+ ", feedback1=" + feedback1 + "]";
	}

	@Id @GeneratedValue
	private int id;
	private String firstname;
	private String lastname;
	private String email;
```

```java
        private String feedback1;

        public Feedback() {
                super();
                // TODO Auto-generated constructor stub
        }

        public Feedback(String firstname, String lastname, String email ,String
feedback1) {
                super();
                this.firstname = firstname;
                this.lastname = lastname;
                this.email= email;
                this.feedback1 = feedback1;
        }

}
```

Com.example.springcore
SpringCoreApplication.java
```java
package com.example.springcore;
import org.springframework.boot.SpringApplication;
import org.springframework.boot.autoconfigure.SpringBootApplication;
import org.springframework.boot.autoconfigure.domain.EntityScan;
import org.springframework.context.annotation.ComponentScan;
import org.springframework.data.jpa.repository.config.EnableJpaRepositories;
import org.springframework.web.bind.annotation.GetMapping;

@SpringBootApplication
@ComponentScan(basePackages="com")

@EntityScan(basePackages="com")
@EnableJpaRepositories(basePackages="com")
public class SpringcoreApplication {
```

```java
        public static void main(String[] args) {
                // TODO Auto-generated method stub
                SpringApplication.run(SpringcoreApplication.class, args);

        }

}
```

Com.service
AppService.java

```java
package com.service;

import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.stereotype.Service;

import com.dao.MyRepo;
import com.entity.Feedback;

@Service
public class AppService {

        @Autowired
        private MyRepo myRepo;

        public boolean addFeedback( Feedback f) {
                myRepo.save(f);
                return true;
        }
}
```
